PROJECTS

HEART STROKE PREDICTION

- A machine learning (ML) model designed to assess the likelihood of an individual experiencing a heart stroke based on their medical history and other relevant factors. This model utilizes various ML algorithms to analyse a range of features such as age, gender, blood pressure, diabetes status, smoking habits, and medical history.

LOAN DEFAULT PREDICTION

-A machine learning model used to forecast the likelihood of a borrower defaulting on a loan based on various factors. The goal is to assess the creditworthiness of individuals or businesses applying for loans, allowing lenders to make informed decisions and manage risks effectively.

HOOK GENERATOR

- Developed an AI-powered Hook Generator leveraging Generative AI to craft captivating headlines and hooks for diverse content pieces and enhancing audience engagement.

PHISHING ATTACK DOMAIN DETECTION

- Created a domain authentication system that would detect if a given domain url is legit or fake website created to perform fraud. Multiple ML models were tested for this problem. A web Interface along with suitable Rest-API's created for commercial use.
